RADEN ANDINI ANGGREANI. "Hubungan Lingkungan Keluarga dan Lingkungan Sekolah Terhadap Disiplin Siswa Jurusan Akuntansi Keuangan dan Lembaga (AKL) SMK Jakarta Timur". Skripsi, Jakarta. Program Studi Pendidikan Ekonomi. Universitas Negeri Jakarta. 2023

Penelitian ini memiliki tujuan untuk mengetahui hubungan lingkungan keluarga (X1) dan lingkungan sekolah (X2) terhadap disiplin siswa jurusan Akuntansi Keuangan Lembaga (AKL) SMK Jakarta Timur. Penelitian ini dilakukan selama dua bulan dari bulan Juli sampai dengan bulan Agustus 2023. Populasi terjangkau dari penelitian ini yaitu sebanyak 137 siswa jurusan AKL yang berasal dari SMK 46 dan SMK 48 Jakarta Timur. Pengambilan sampel dengan menggunakan teknik *proportional random sampling* sehingga didapatkan sampel sebanyak 101 siswa. Data untuk variabel lingkungan keluarga (X1), lingkungan sekolah (X2) dan disiplin siswa (Y) diperoleh melalui pengumpulan jawaban dari kuesioner. Dari hasil uji pra analisis penelitian, data yang dimiliki peneliti dinyatakan berdistribusi normal dan linear. Berdasarkan analisis penelitian, didapatkan hasil uji t parsial yang menunjukkan adanya hubungan antara variabel lingkungan keluarga dengan disiplin siswa dengan angka $t_{hitung} = 2{,}276 > t_{tabel} = 1{,}661$ dan untuk variabel lingkungan sekolah, hasil uji t parsial menunjukkan angka $t_{hitung} = 4{,}866$ yang selanjutnya dibandingkan dengan t_{tabel} yaitu: 1,661 maka dapat diperoleh $t_{hitung} > t_{tabel}$ maka dinyatakan bahwa terdapat hubungan antara lingkungan sekolah dengan disiplin siswa. Kemudian dengan melakukan uji F didapatkan angka F_{tabel} sebesar 3,089 dan F_{hitung} dengan nilai 25,523 maka diperoleh $F_{hitung} > F_{tabel}$ hal ini menandakan bahwa lingkungan keluarga (X1) dan lingkungan sekolah (X2) secara bersama-sama atau simultan berhubungan dengan disiplin siswa (Y).

Kata Kunci : Lingkungan keluarga, Lingkungan sekolah, disiplin siswa

Abstract

RADEN ANDINI ANGGREANI. "The Relationship Of Family Environment and School Environment on The Discipline of Students' Majoring in Accounting at East Jakarta Vocational High Schools". Thesis, Jakarta. Economic Education Study Program State University of Jakarta. 2023

This study aims to determine the relationship between the family environment (X1) and the school environment (X2) on the discipline of students majoring in Accounting at East Jakarta Vocational High Schools. This research was conducted for two months from July to August 2023. The reachable population of this study was 137 students majoring in Accounting from SMKN 46 and SMKN 48 East Jakarta. The sampling used proportional random sampling technique so that a sample of 101 students was obtained. Data for family environment variables (X1), school environment (X2) and students' discipline (Y) were obtained through collecting answers from the questionnaire. From the results of the research pre-analysis test, the data owned by the researcher was stated to be normally and linearly distributed. Based on the research analysis, the results of the partial t test showed that there was a relationship between family environment variables and student discipline with $t_{count} = 2.276 > t_{table} = 1.661$ and for school environment variables, the partial t test results showed $t_{count} = 4.866$ which was then compared to t_{table}, namely : 1.661, it can be obtained that $t_{count} > t_{table}$, it is stated that there is a relationship between the school environment and student discipline. Then by doing the F test, the F_{table} number is 3.089 and F_{count} with a value of 25.523, so $F_{count} > F_{table}$ indicates that the family environment (X1) and school environment (X2) are jointly or simultaneously related to student discipline (Y).

Keywords: the family environment, school environment, students discipline
